

Tropical Depression NINE QuickLook
Posted: 05:00 CDT 08/31/2016

NOAA and NOAA Partnership Stations Relative to the Storm

Storm Analysis

As of 8/31/2016 05:00 CDT, water levels along the Gulf Coast from Mississippi to Naples, FL are elevated and range from 0.7 to 1.3 feet above normal tide levels. Winds remain between 5 and 15 knots with slightly higher gusts at this time. Barometric pressure is slowly falling across the area.

Water Level and Meteorological plots available below are updated automatically. A line denoting Mean Higher High Water (MHHW) is displayed to provide an approximate indication of when flooding inundation may occur.

For additional data, please see the Center for Operational Oceanographic Products & Services website. For more information or archived products and reports, please see the Storm QuickLook Homepage.

TROPICAL DEPRESSION NINE ADVISORY NUMBER 11
NWS NATIONAL HURRICANE CENTER MIAMI FL AL092016
400 AM CDT WED AUG 31 2016

...TROPICAL STORM WARNING ISSUED FOR A PORTION OF THE FLORIDA GULF COAST...

SUMMARY OF 400 AM CDT...0900 UTC...INFORMATION

LOCATION...24.5N 88.1W
ABOUT 405 MI...655 KM SSW OF APALACHICOLA FLORIDA
ABOUT 425 MI...680 KM SW OF TAMPA FLORIDA
MAXIMUM SUSTAINED WINDS...35 MPH...55 KM/H
PRESENT MOVEMENT...N OR 360 DEGREES AT 2 MPH...4 KM/H
MINIMUM CENTRAL PRESSURE...1004 MB...29.65 INCHES

WATCHES AND WARNINGS

CHANGES WITH THIS ADVISORY:

A Tropical Storm Warning has been issued for the Gulf coast of Florida from Anclote River to the Walton/Bay County Line.

SUMMARY OF WATCHES AND WARNINGS IN EFFECT:

A Hurricane Watch is in effect for...

* Anclote River to Indian Pass

A Tropical Storm Warning is in effect for...

* Anclote River to the Walton/Bay County line

A Hurricane Watch means that hurricane conditions are possible within the watch area. A watch is typically issued 48 hours before the anticipated first occurrence of tropical-storm-force winds, conditions that make outside preparations difficult or dangerous.

A Tropical Storm Warning means that tropical storm conditions are expected somewhere within the warning area within 36 hours.

Interests along the United States east coast from northern Florida through the Carolinas should monitor the progress of this system.

For storm information specific to your area, including possible inland watches and warnings, please monitor products issued by your local National Weather Service forecast office.

DISCUSSION AND 48-HOUR OUTLOOK

At 400 AM CDT (0900 UTC), the center of Tropical Depression Nine was located near latitude 24.5 North, longitude 88.1 West. The depression is moving toward the north near 2 mph (4 km/h). A north-northeastward motion at a faster forward speed is expected to begin later today, and a turn toward the northeast is forecast tonight. On the forecast track, the center of the tropical cyclone will approach the northwest Florida coast in the warning area on Thursday afternoon.

Maximum sustained winds are near 35 mph (55 km/h) with higher gusts. Strengthening is forecast during the next 48 hours, and the depression is expected to become a tropical storm later today, and could be near hurricane strength by the time landfall occurs.

The estimated minimum central pressure is 1004 mb (29.65 inches).

HAZARDS AFFECTING LAND

WIND: Tropical Storm conditions are expected to first reach the coast within the warning area on Thursday afternoon. Hurricane conditions are possible over portions of the Hurricane Watch area beginning Thursday afternoon.

STORM SURGE: The combination of a dangerous storm surge and the tide will cause normally dry areas near the coast to be flooded by rising waters moving inland from the shoreline. There is a possibility of life-threatening inundation within the next 48 hours along the Gulf coast of Florida from Aripeka to Indian Pass. For a depiction of areas at risk, please see the Prototype National Weather Service Storm Surge Watch/Warning Graphic. Persons located within these areas should be prepared to take all necessary actions to protect life and property from rising water. Promptly follow any instructions from local officials.

The water could reach the following heights above ground if the peak surge occurs at the time of high tide...

Indian Pass to Ochlockonee River...2 to 4 feet

Ochlockonee River to Chassahowitzka...3 to 5 feet

Chassahowitzka to Aripeka...2 to 4 feet.

Aripeka to Bonita Beach...including Tampa Bay...1 to 2 feet

The Prototype National Weather Service Storm Surge Watch/Warning Graphic is a depiction of areas that would qualify for inclusion under a storm surge watch or warning currently under development by the National Weather Service and planned for operational use in 2017. This prototype graphic is available at www.hurricanes.gov/graphics_at4.shtml?wsurge

RAINFALL: The depression is expected to produce additional rain accumulations of 2 to 4 inches over western Cuba through today, with maximum storm total amounts up to 20 inches. These rains could cause life-threatening flash floods and mud slides. Storm total rainfall amounts of 5 to 10 inches are possible over portions of central and northern Florida through Friday, with isolated maximum amounts of 15 inches possible. Coastal areas of Georgia and the Carolinas are expected to receive storm total rainfall of 4 to 7 inches, with local amounts of 10 inches possible through Saturday morning. These rains may cause flooding and flash flooding.

TORNADOES: Isolated tornadoes are possible late tonight into Thursday morning mainly across central Florida. A few tornadoes are possible Thursday afternoon into Thursday night over north Florida and southeast Georgia.

NEXT ADVISORY

Next intermediate advisory at 700 AM CDT.

Next complete advisory at 1000 AM CDT.
